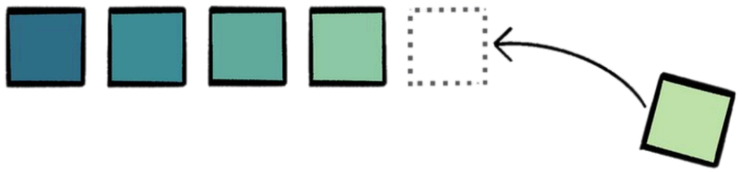
JS Methods

By Satyawan Panchal

push()

Adds element(s) to the end of an array.

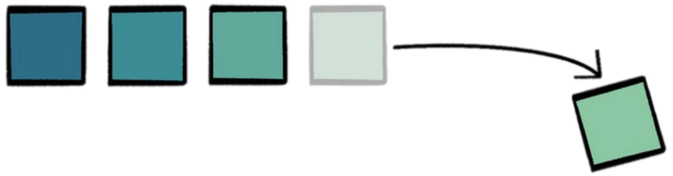


Syntax:

```
array.push(element1, element2, ..., elementN)
```

pop()

Removes the last element from an array.



Syntax:

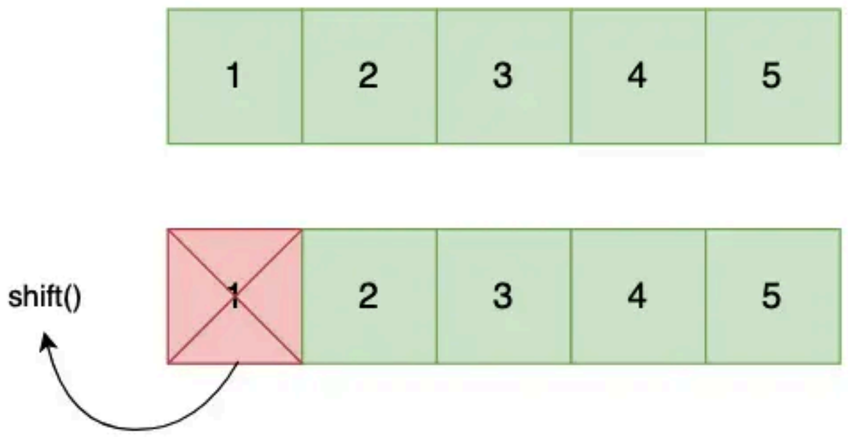
```
array.pop()
```

shift()

Removes the first element from an array and returns it.

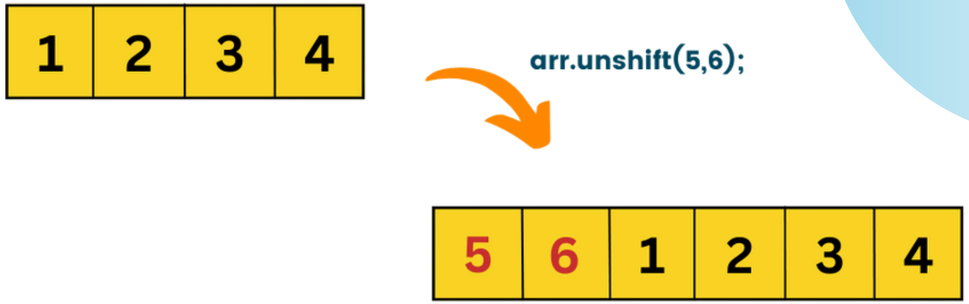
Syntax:

```
array.shift()
```



unShift()

Adds one or more elements to the beginning of an array and returns the new length of the array.



Syntax:

array.unshift(element1, element2, ..., elementN)

slice()

Syntax: Arrayname.slice(start,end);

start – inclusive

end – exclusive

splice()

- splice() mutates the original array.
- If deleteCount is 0, no elements are removed.
- If you don't pass any items to add, it only removes.

splice()

Syntax: splice(start, deleteCount, item1, item2,...)

start → The index where changes begin.
deleteCount → Number of elements to remove.
item1, item2, ... → Elements to add at that position.
