# **JS Methods**

**By Satyawan Panchal**

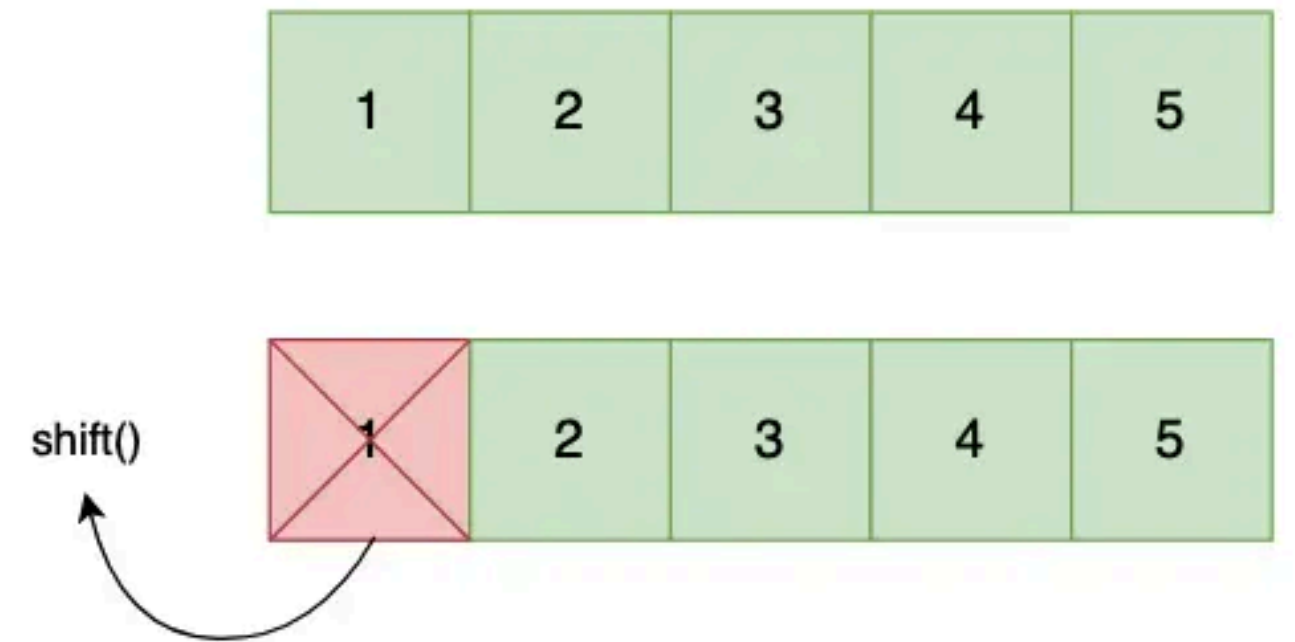

# shift()

Removes the first element from an array and returns it.

Syntax:

```
array.shift()
```

# unshift()

Adds one or more elements to the beginning of an array and returns the new length of the array.

`arr.unshift(5,6);`

An orange curved arrow pointing from the code text down to the resulting array diagram.

## Syntax:

```
array.unshift(element1, element2, ..., elementN)
```
